

Professional Summary

First-generation, bilingual Computer Science student with professional experience developing production web applications, e-commerce systems, and client websites. Proficient in TypeScript, JavaScript, and Python, with hands-on experience in software development, Git collaboration, debugging, and data analysis. Interested in software engineering, data engineering, analytics, and automation.

Education

EXPECTED GRAD - 2028

The University of Texas at Arlington
B.S. Computer Science, In Progress
Tarrant County College
Associate of Arts, May 2026
Relevant Coursework: Data Structures, Object-Oriented Programming, Intermediate Programming, Python for Data Science, Introduction to Data Science, Computer Organization & Assembly Language

Technical Skills

Languages: TypeScript, JavaScript, Python, HTML, CSS; familiarity with Java and Swift
Frameworks & Development: Next.js, React, Tailwind CSS, Node.js, REST APIs
Data & Analytics: Power BI, Excel, Power Query (M), Data Cleaning & Transformation
Tools & Design: Git, GitHub, VS Code, Vercel, Postman, Jupyter, Google Colab, Xcode, UI/UX, Responsive Design

Experience

2025 - PRESENT
DALLAS, TX

Project-Based Software Developer — Ravi's Import Warehouse
Developed and maintained customer-facing B2B e-commerce features using Next.js, TypeScript, and React, including product catalog pages, tiered unit/case/pallet pricing, search, filtering, cart, and checkout interfaces. Implemented server-backed pagination fetching 30 products per request across a catalog with tens of thousands of products, while improving responsive behavior across desktop and mobile. Built and refined product search and filtering logic, including category, weight, size, and price-based filters, and troubleshooted incorrect or missing search results through iterative debugging and browser developer tools. Supported pricing and cart workflows by displaying calculated discounts, per-unit pricing, quantity controls, and clear cart-state behavior designed for fast business purchasing. Collaborated with an internal developer through GitHub branching, reviews, and weekly feature deadlines, incorporating direct feedback from company leadership and business customers. Troubleshooted Power BI reporting workflows by configuring source data, transforming datasets with Power Query (M), validating report outputs with Excel and Python, and resolving refresh and date-filtering issues.

2025 - PRESENT
DALLAS, TX

Founder & Web Developer — SwiftSend

- Design, develop, and deploy responsive Next.js and TypeScript websites for small-business clients, managing requirements, UI/UX, domains, hosting, and ongoing maintenance.
- Build client workflows including multi-step quote forms, image submissions, Stripe payments, automated emails, and rule-based support tools.

MAR 2026 - JUL 2026
LAS COLINAS, TX

Bilingual Account Resolution Specialist — Wells Fargo

- Utilized multiple enterprise systems to research auto loan accounts, process payments, document interactions, and resolve customer inquiries in English and Spanish.
- Managed concurrent customer workflows while maintaining accurate records, protecting confidential information, and collaborating with internal teams.

Projects

SwiftSend Support Assistant — Automated Customer Support Tool

- Developed a rule-based customer support assistant using TypeScript and React, implementing predefined response logic, message-state handling, and an interactive chat interface.
- Integrated the assistant into the SwiftSend website to automate common customer inquiries and provide immediate support without relying on external AI APIs.

How About? — E-Commerce & Digital Brand

- Built and deployed a responsive e-commerce storefront with interactive product galleries, shopping-cart functionality, Stripe checkout, contact forms, and automated order-confirmation emails.
- Founded and grew the brand through organic social media, generating 15M+ views and approximately 7,800 followers within three months of launch.

Vehicle Wrap Business Platform

- Developed a responsive automotive website with multi-step quote requests, customer image submissions, and interactive service presentation.
- Built an administrative quotation workflow with Stripe payment integration and email-based image handling to support client communication while minimizing external storage costs.

Google Professional Certificates

- Google IT Automation with Python Professional Certificate
- Google UX Design Professional Certificate
- Google Data Analytics Professional Certificate
